

DEPARTMENT OF RADIOLOGY & ORTHOPEDIC ONCOLOGY

MedFracture-Net Clinical Decision Support System | Automated AI Radiographic Assessment

Study Accession: MFN-DX-84920	Exam Timestamp: 2026-10-02 23:12:10
Anatomical Region: Humerus (Upper Arm)	Modality: Digital Projection Radiography (DX)
Referring Unit: Emergency Trauma Center	Analysis Protocol: Multi-Task U-Net++ & ResNet-34

Diagnostic Assessment:	UNREMARKABLE (CORTEX INTACT)
Posterior Confidence Score:	99.2%
Morphological Fracture Classification:	Unremarkable (Intact Cortical Architecture)
Calculated Fracture Extent:	0.0 mm
Clinical Severity Stratification:	Normal (No Discontinuity)
Localization Bounding Coordinate:	None (Intact Cortex)
Inference Processing Latency:	28.4 ms (Real-Time Sub-30ms Execution)

Radiographic Verification & Explainable AI (Grad-CAM++)

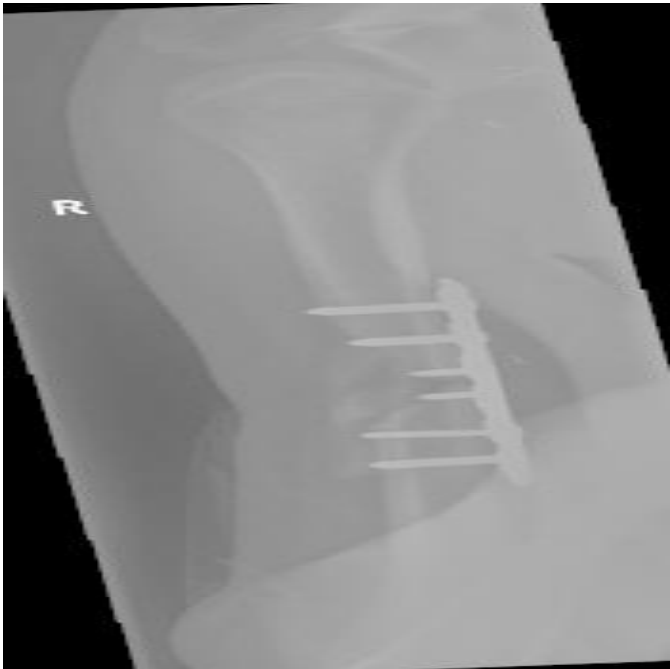

Fig 1: Sub-Pixel Instance Segmentation & Rotated Bounding Fissure

Clinical Impression & Orthopedic Protocol:

Normal bone cortical architecture observed. Routine clinical correlation and observation advised.
